Chapter 1 Introduction

1.1 About This Manual

This manual contains all required information for setting up and using the CAR-3030 series.

CAR-3030 provides the essential platform for delivering optimal performance and functionality in the value communications appliance market segment. This manual should familiarize you with CAR-3030 operations and functions. CAR-3030 series provide up to six on-board Ethernet ports to serve communication applications like Firewall, requiring six Ethernet ports to connect external network (internet), demilitarized zone and internal network.

CAR-3030 series overview:

- ◆ Support LGA-1155 Dual-Core* and Quad-Core* CPU
- ◆ Up to 16GB support un-buffered DDR3 1333
- ◆ Two USB ports and two COM ports
- ◆ Two SATA connectors for SATA Hard disk
- ◆ PCI-E architecture with totally six x1 PCI-E interfaces
- ◆ One PCI-E x8 Golden finger GF reserved for proprietary daughter card in R/M
- ◆ Provides absolute high flexibility of customized I/O configuration

◆ 1.2 Manual Organization

- ◆ This manual describes how to configure your COS-0906 system to meet various operating requirements. It is divided into three chapters, with each chapter addressing the basic concept and operation of this system.
- ◆ Chapter 1: Introduction. This section describes how this document is organized. It includes brief guidelines and overview to help find necessary information.
- ◆ Chapter 2: Hardware Configuration Setting and Installation. This chapter demonstrated the hardware assembly procedure, including detailed information. It shows the definitions and locations of Jumpers and Connectors that can be used to configure the system.
- ◆ Chapter 3: Operation Information. This section provides illustrations and information on the system architecture and how to optimize its performance.

1.4 Board Layout

Figure 1-1 **Board Layout of CAR-3030 M/B**

1.5 System Block Diagram

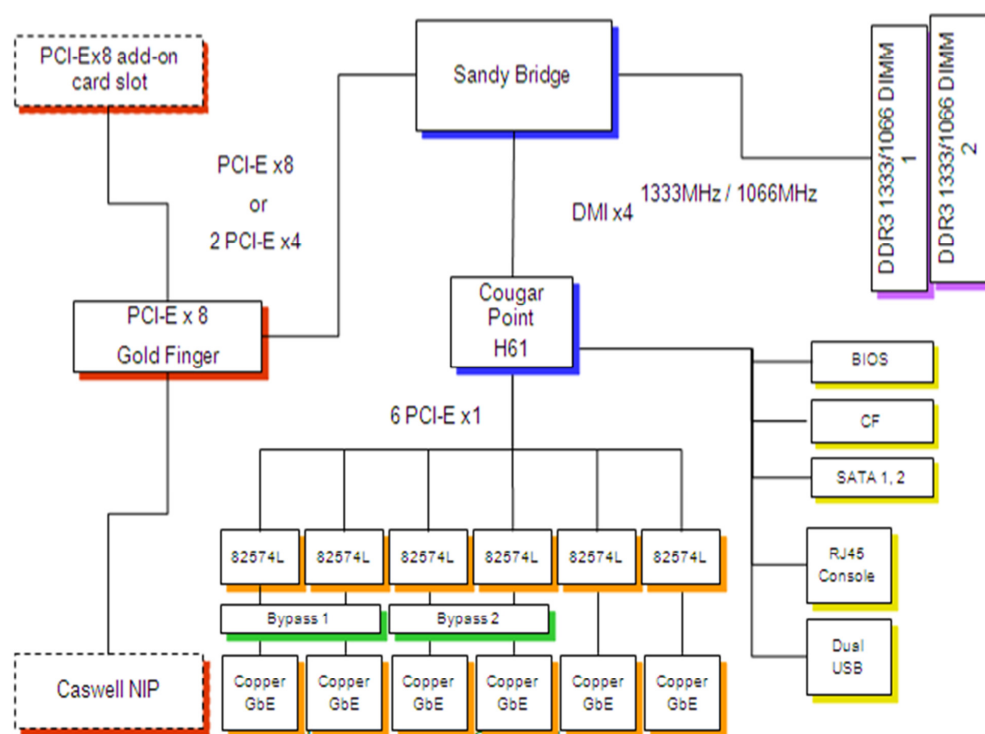

Figure 1-2 CAR-3030 Basic Block Diagram

1.6 Product Specifications

1.

#	Feature	Detailed Description
1	CPU	Intel LGA 1155 Dual-Core* and Quad-Core* CPU
2	CPU Board	<ul style="list-style-type: none"> ◆ CAPB-3030VR with Intel® H61 chipset ◆ Board size: 248 mm / 9.8" (L) x 193 mm / 7.6" (W)
3	System Memory	<ul style="list-style-type: none"> ◆ 2 DIMM slots. ◆ Supports un-buffered DDR3 1333 ◆ Up to 16GB
4	Power Supply	<ul style="list-style-type: none"> ◆ Full range ATX PSU with total 250W power output will be required. ◆ Dimension: 180 x 100 x 40.5 mm
5	Ethernet	<ul style="list-style-type: none"> ◆ Six PCI-E (x1) Gigabit Ethernet port based on Intel 82574L in two bypass segments from H61
6	SATA & IDE Interfaces	<ul style="list-style-type: none"> ◆ Two SATA Interfaces on board ◆ One IDE channel from H61 supports one Compact Flash Socket.
7	Front Panel	<ul style="list-style-type: none"> ◆ 6 RJ-45 connector for PCI-E (x1) GbE interfaces ◆ Hardware Reset Button ◆ System LED: Power, Data access. ◆ Bypass LED ◆ Ethernet LED: For every Ethernet interface there should be LEDs for link status and speed of LAN-ports.
8	Rear Panel	<ul style="list-style-type: none"> ◆ AC power inlet ◆ On/Off switch ◆ Fan opening for system ventilation.
9	Golden finger	<ul style="list-style-type: none"> ◆ One PCI-E x8 GF reserved for proprietary daughter card in R/M
10	Dimension	<ul style="list-style-type: none"> ◆ W:443mm/17.4" x D:292mm /11.5" x H: 44mm /1.73" (1U)
11	Environmental requirement	Operating
		Storage
		Acoustics
		Temperature
		Relative Humidity
		Shock
11	Environmental requirement	Vibration

#	Feature	Detailed Description			
		Transportation		(Packaged) 0.5 sine shock, 50G peak on each surface.	
		Drop		(Packaged) H= 1.2M	
		Random Vibration		(Packaged) Sine Wave,2.8G / 5~500 Hz, 1hours at each axis(X,Y,Z)	

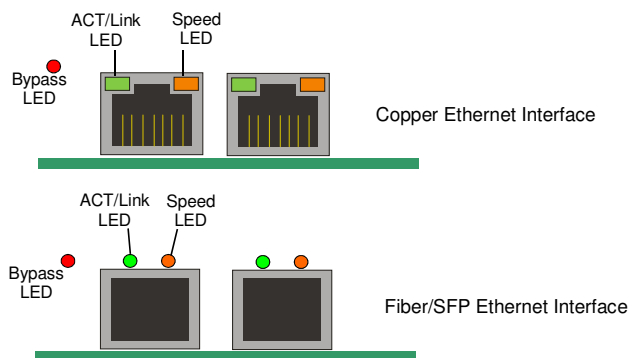

1.7 LED Signaling Standard

1. Power and Data-access LED

Lettering	Symbol	Function	Color	Signaling
PWR		Power status	Green	Off – No power, system off. On – Power good, system on.
Data Access		Data Access	Red	Off – no data access through IDE or SATA channel On – data is in transition through IDE or SATA channel

2. Ethernet LED

Label	Color	Indication	Status
ACT/LINK	Green Or Others	On	1. The Ethernet port is receiving power. 2. Good linkage between the Ethernet port and its supporting hub.
		Off	1. The adapter and switch are not receiving power. 2. No connection between both ends of network cable. 3. The drivers of Ethernet have not been loaded or does not function correctly.
	Green Or Others	Flashing	The adapter is sending or receiving network data. The frequency of the flashes varies with the amount of network traffic.
SPEED	Yellow	On	ACT/LNK LED must on then this LED show the operating at 1000 Mbps. If ACT/LINK is off and this function will be disable.
	Green	On	ACT/LNK LED must on then this LED show the operating at 100 Mbps. If ACT/LINK is off and this function will be disable.
		Off	ACT/LNK LED must on then this LED show the operating at 10 Mbps. If ACT/LINK is off and this function will be disable.

3. Bypass LED

LED Status	green	red	off
Bypass Mode/Status	normal mode	bypass mode, triggered by WDT expiring	power off, in normal or bypass mode which is defined by customer

Chapter 2 Getting Started

This section describes how the hardware installation and system settings should be done.

2.1 Included Hardware

The following hardware is included in package:

- ♦ CAR-3030 Communication Appliance System Board
- ♦ One null serial port cable

Note: "Rack Mount Instructions - The following or similar rack-mount instructions are included with the installation instructions:

A) Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (T_{ma}) specified by the manufacturer.

B) Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

C) Mechanical Loading - Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.

D) Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

E) Reliable Earthing - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips)."

2.2 Before You Begin

To prevent damage to any system board, it is important to handle it with care. The following measures are generally sufficient to protect your equipment from static electricity discharge:

When handling the board, use a grounded wrist strap designed for static discharge elimination and touches a grounded metal object before removing the board from the antistatic bag. Handle the board by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.

When handling processor chips or memory modules, avoid touching their pins or gold edge fingers. Restore the communications appliance system board and peripherals back into the antistatic bag when they are not in use or not installed in the chassis.

Some circuitry on the system board can continue operating even though the power is switched off. Under no circumstances should the Lithium battery cell used to power the real-time clock be allowed to be shorted. The battery cell may heat up under these conditions and present a burn hazard.

WARNING!

"CAUTION: DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. REPLACE ONLY WITH SAME OR EQUIVALENT TYPE RECOMMENDED BY THE MANUFACTURER. DISCARD USED BATTERIES ACCORDING TO THE MANUFACTURER'S INSTRUCTIONS"

This guide is for technically qualified personnel who have experience installing and configuring system boards. Disconnect the system board power supply from its power source before you connect/disconnect cables or install/remove any system board components. Failure to do this can result in personnel injury or equipment damage.

Avoid short-circuiting the lithium battery; this can cause it to superheat and cause burns if touched.

Do not operate the processor without a thermal solution. Damage to the processor can occur in seconds.

Do not block air vents. Minimum 1/2-inch clearance required.

2.3.1 CAR-3030 System Board Jumper

In general, jumpers on CAR-3030 system board are used to select options for certain features. Some of the jumpers are configurable for system enhancement. The others are for testing purpose only and should not be altered. To select any option, cover the jumper cap over (Short) or remove (NC) it from the jumper pins according to the following instructions. Here NC stands for “Not Connected”.

CAPB-3030 Jumper setting: (Default setting : *)

JP6: CMOS Clear

JP6	Function
1-2 Short	Normal Operation *
2-3 Short	Clear CMOS Contents

2.4 The Chassis

The system is integrated in a customized 1U chassis (**Fig. 2-1, Fig. 2-2**). On the front panel you will find, six LAN ports, two USB ports and a COM port.

Fig. 2-1 Front view of the chassis

Fig. 2-2 Rear view of the chassis

2.5 Open the Chassis

- Loosen the 6 screws of the chassis, two on each side and the rest two on the back, to remove the top lead (Fig. 2-3).

Fig. 2-3 Take off screws

Formatted: Bullets and Numbering

- The top lead (Fig. 2-4) can be removed from the base stand (Fig. 2-5).

Formatted: Bullets and Numbering

2.6 Install a Different Processor

To install a CPU

1. Locate the CPU socket on the motherboard

CPU socket 1156

2. Press the load lever with your thumb (A), then move it to right (B) until it is released from the retention tab

To prevent damage to the socket pins, do not remove the PnP cap unless you are installing a CPU.

3. Lift the load lever in the direction of the arrow until the load plate is completely lifted.

4. Remove the PnP cap from CPU socket.

5. Position the CPU over the socket, ensuring that the gold triangle is on the bottom-left corner of the socket, and then fit the socket alignment keys into the CPU notch.

The CPU fits in only one correct orientation. DO NOT force the CPU into the socket to prevent bending the connectors on the socket and damaging the CPU!

6. Close the load plate (A), and then push down the load lever (B), ensuring that the front edge of the load plate slides under the retention knob (C).

7. Insert the load lever under the retention tab.

2.7 Remove and Install DIMM

Follow these steps to upgrade RAM module:

Make sure to unplug the power supply before adding or removing DIMMs or other system components. Failure to do so may cause severe damage to both the motherboard and the components.

1. Unlock a DIMM socket by pressing the retaining clips outward
2. Align a DIMM on the socket such that the notch on the DIMM matches the break on the socket

A DDR DIMM is keyed with a notch so that it fits in only one direction. DO NOT force a DIMM into a socket to avoid damaging the DIMM.

3. Firmly insert the DIMM into the socket until the retaining clips snap back in place and the DIMM is properly seated

Follow these steps to remove a DIMM:

1. Simultaneously press the retaining clips outward to unlock the DIMM

2.8 Remove and Install Compact Flash Card

4. Insert the Compact Flash Card into the CF interface

Formatted: Bullets and Numbering

Compact Flash Card

Insert Compact Flash Card into the CF interface

3. The completed installation of Compact Flash Card is shown as

Formatted: Bullets and Numbering

Completion of Compact Flash Card connection

2.9 Remove and Install Battery

1. Press the metal clip back to eject the button battery
2. Replace it with a new one by pressing the battery with fingertip to restore the battery

Formatted: Bullets and Numbering

Eject the battery

Restore the battery

2.10 Install HDD

The system has an internal drive bay for one 3.5" or 2.5" SATA hard disk drive. If the HDD is not pre-installed, you can install it by yourself. Follow the steps below to install the HDD:

There are three hard disk kits in the CAR-3030 system :Hard disk fixed plate and hard disk tray

1. No add any card, use 3.5" HDD kit:

3.5"HDD Kit install HDD bracket

Fix the hard disk drive on the HDD Bracket with four screws.

Fasten the two screws to lock Hard disk fixed plate and chassis

Connect Power cable and HDD cable to CAR-3030 system board

2. When add standard card, use 2.5" HDD kit 1:

2.5"HDD Kit 1

Fix the hard disk drive on the HDD. Bracket with four screws.

Fasten the four screws to lock Hard disk fixed plate and chassis

Connect Power cable and HDD cable to CAR-3030 system board

3. When add ABN series card, use 2.5" HDD kit 2:

2.5"HDD Kit 2

Fix the hard disk drive on the HDD. Bracket with four screws.

Fix the copper pillar on the riser card with two screws.

Fasten the four screws to lock Hard disk fixed plate and chassis
Connect Power cable and HDD cable to CAR-3030 system board

2.11 Ear Mount Kit Installation

The CAR-3030 series shipped with 2 ear mount kits. The following is the installation instruction of these ear mounts:

1. Take out the L shape ear mount kits. One ear mount fits on one side of the chassis,
2. Placing the side with four holes against the chassis and the side with two holes face outward.
3. Fasten five screws on each side

Fasten the screws to the side

2.12 Remove EZIO / LCD

The CAR-3030 series support EZIO modules. The following is the remove instruction of these EZIO/LCD modules:

1. Remove all cables from EZIO

Fig.2-14 Remove the cable from EZIO

Fig.2-15 After remove the cable from EZIO

1. Remove the screws from chassis.

Fig.2-16 Remove the screws from EZIO

Fig.2-17 Remove screws from chassis.

EZIO

2.13 Remove Power Supply

The following is the remove step instruction of power supply.

1. Remove all power cables from main board.
2. Remove the screws from PSU

Remove all cables from board

Remove all cables from board

Remove the screws from PSU

Remove the screws from PSU

Complete remove power supply

2.14 Remove main board

The following is the remove step instruction of main board.

1. Remove all cables and heatsink from main board.
2. Remove all screws from main board.

Remove all cables and heatsink from main board

Complete remove main board

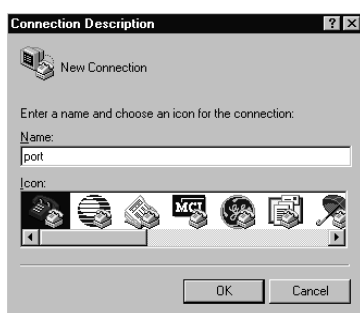

Connection Using Hyper Terminal

If users use a headless CAR-3030 system, which has no mouse/keyboard and VGA output connected to it, the console may be used to communicate with CAR-3030.

To access CAR-3030 via the console, Hyper Terminal is one of many choices. Follow the steps below for the setup:

Note: Terminal software may need to update for correct console output.

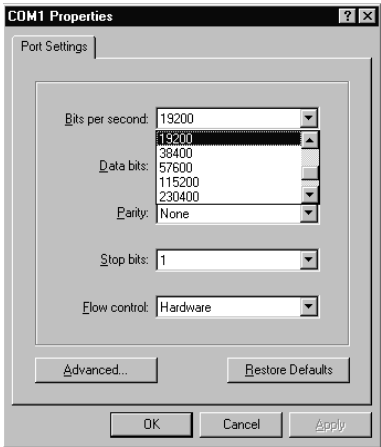

1. Execute HyperTerminal under C:\Program Files\Accessories\HyperTerminal
2. Enter a name to create new dial

3. For the connection settings, make it Direct to Com1.

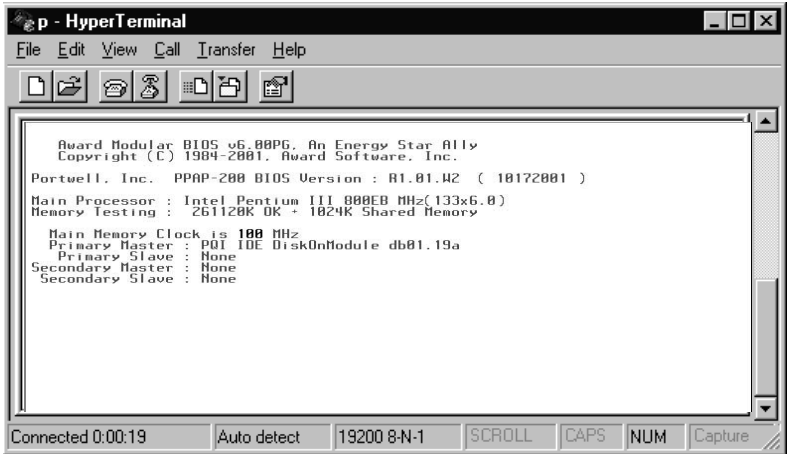

4. Please make the port settings to Baud rate 19200, Parity None, Data bits 8, Stop bits 1

- 5.5. Turn on the power of CAR-3030 system, after following screen was shown:

- 6.6. You can then see the boot up information of CAR-3030.

Formatted: Bullets and Numbering

Formatted: Bullets and Numbering

7. When message "Hit if you want to run Setup" appear during POST, after turning on or rebooting the computer, press **<Tab>** key ***immediately*** to enter BIOS setup program.

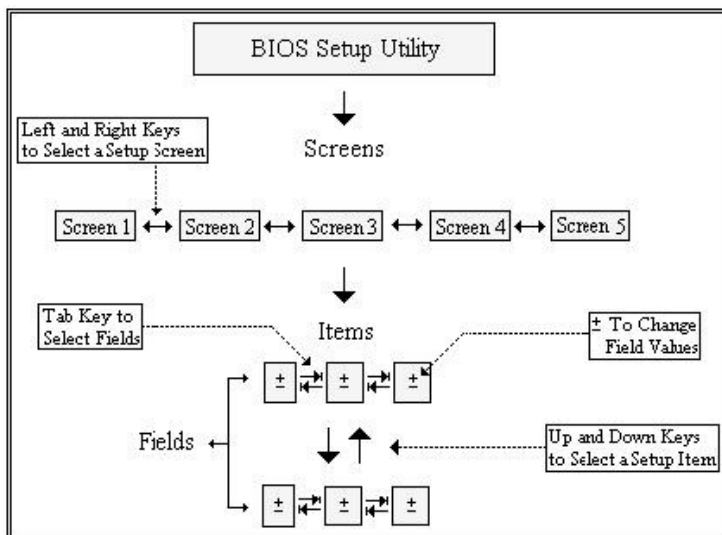

This is the end of this section. If the terminal did not port correctly, please check the previous steps.

Chapter 3 BIOS Setting

BIOS Setup Information

Power on the system, press the to run BIOS setup. After you press the <Delete> key, the main BIOS setup menu displays. You can access the other setup screens from the main BIOS setup menu, such as the Chipset and Power menus.

The BIOS setup/utility uses a key-based navigation system called hot keys. Most of the BIOS setup utility hot keys can be used at any time during the setup navigation process. These keys include <F1>, <F10>, <Enter>, <ESC>, <Arrow> keys, and so on.

Control Keys

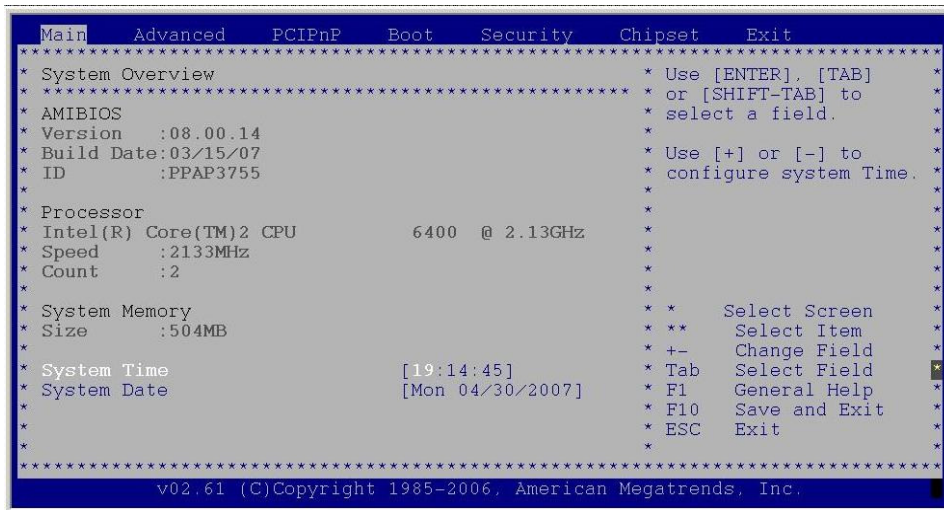

Key	Function
↑↓Up /Down	The <i>Up and Down</i> <Arrow> keys allow you to select a setup item or sub-screen.
→ ← Left/Right	The <i>Left and Right</i> <Arrow> keys allow you to select a setup screen. For example: Main screen, Advanced screen, Chipset screen, and so on.

+ - Plus/ Minus	The <i>Plus and Minus</i> <Arrow> keys allow you to change the field value of a particular setup item. For example: Date and Time.
Tab	The <Tab> key allows you to select setup fields.

Hot Key	Description		
F1	<p>The <F1> key allows you to display the <i>General Help</i> screen.</p> <p>Press the <F1> key to open the <i>General Help</i> screen.</p> <div style="border: 1px solid black; padding: 10px; margin: 10px 0;"> <p>General Help</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%; vertical-align: top;"> <p>←→ Select Screen</p> <p>+ - Change Screen</p> <p>PGDN Next Page</p> <p>Home Go to Top of the Screen</p> <p>F2/F3 Change Colors</p> <p>F8 Load Failsafe Defaults</p> <p>F10 Save and Exit</p> </td><td style="width: 50%; vertical-align: top;"> <p>↓↑ Select Item</p> <p>Enter Go to Sub Screen</p> <p>PGUP Previous Page</p> <p>End Go to Bottom of Screen</p> <p>F7 Discard Changes</p> <p>F9 Load Optimal Defaults</p> <p>ESC Exit</p> </td></tr> </table> <p style="text-align: center; margin-top: 10px;">[Ok]</p> </div>	<p>←→ Select Screen</p> <p>+ - Change Screen</p> <p>PGDN Next Page</p> <p>Home Go to Top of the Screen</p> <p>F2/F3 Change Colors</p> <p>F8 Load Failsafe Defaults</p> <p>F10 Save and Exit</p>	<p>↓↑ Select Item</p> <p>Enter Go to Sub Screen</p> <p>PGUP Previous Page</p> <p>End Go to Bottom of Screen</p> <p>F7 Discard Changes</p> <p>F9 Load Optimal Defaults</p> <p>ESC Exit</p>
<p>←→ Select Screen</p> <p>+ - Change Screen</p> <p>PGDN Next Page</p> <p>Home Go to Top of the Screen</p> <p>F2/F3 Change Colors</p> <p>F8 Load Failsafe Defaults</p> <p>F10 Save and Exit</p>	<p>↓↑ Select Item</p> <p>Enter Go to Sub Screen</p> <p>PGUP Previous Page</p> <p>End Go to Bottom of Screen</p> <p>F7 Discard Changes</p> <p>F9 Load Optimal Defaults</p> <p>ESC Exit</p>		
F10	<p>The <F10> key allows you to save any changes you have made and exit Setup. Press the <F10> key to save your changes. The following screen will appear:</p> <div style="border: 1px solid black; padding: 10px; margin: 10px 0;"> <p style="text-align: center;">Save configuration changes and exit now?</p> <div style="text-align: center; margin-top: 10px;"> [Ok] [Cancel] </div> </div> <p>Press the <Enter> key to save the configuration and exit. You can also use the <Arrow> key to select <i>Cancel</i> and then press the <Enter> key to abort this function and return to the previous screen.</p>		
ESC	<p>The <Esc> key allows you to discard any changes you have made and exit the Setup. Press the <Esc> key to exit the setup without saving your changes. The following screen will appear:</p> <div style="border: 1px solid black; padding: 10px; margin: 10px 0;"> <p style="text-align: center;">Discard changes and exit setup now?</p> <div style="text-align: center; margin-top: 10px;"> [Ok] [Cancel] </div> </div> <p>Press the <Enter> key to discard changes and exit. You can also use the <Arrow> key to select <i>Cancel</i> and then press the <Enter> key to abort this function and return to the previous screen.</p>		
Enter	<p>The <Enter> key allows you to display or change the setup option listed for a particular setup item. The <Enter> key can also allow you to display the setup sub- screens.</p>		

Main Menu

When you first enter the Setup Utility, you will enter the Main setup screen. You can always return to the Main setup screen by selecting the *Main* tab. There are two Main Setup options. They are described in this section.

System Date / Time

Use this option to change the system time and date. Highlight System Time or System Date using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time is entered in HH:MM:SS format.

➤ Advanced BIOS Setup

Select the *Advanced* tab from the setup screen to enter the Advanced BIOS Setup screen. You can select any of the items in the left frame of the screen, such as SuperIO Configuration, to go to the sub menu for that item. You can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screen is shown below. The sub menus are described on the following pages.

➤ IDE Configuration Setup

From the IDE Configuration screen, press <Enter> to access the sub menu. Use the up and down <Arrow> keys to select an item. The settings are described on the following pages.

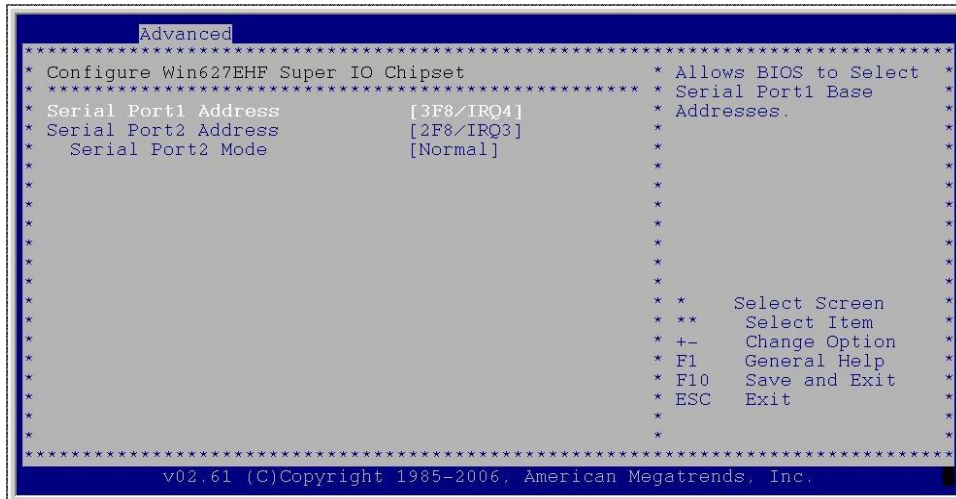

➤ SUPER IO CONFIGURATION

Super IO Configuration

You can use this screen to select options for the Super I/O settings. Use the up and down <Arrow> keys to select an item. Use the <Plus> and <Minus> keys to change the value of the selected option. The settings are described on the following pages. The screen is

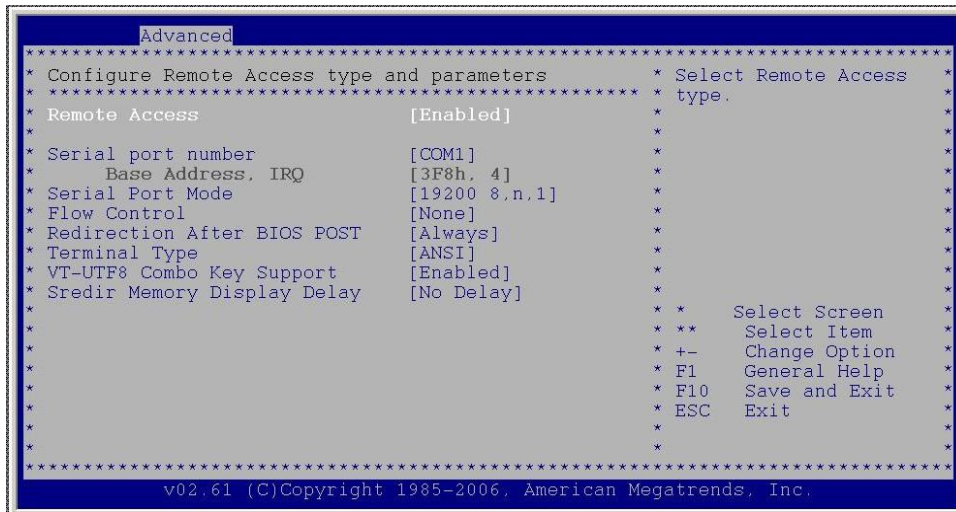

shown below.

➤ REMOTE ACCESS CONFIGURATION

Remote Access Configuration

You can use this screen to select options for the Remote Access Configuration. Use the up and down <Arrow> keys to select an item. Use the <Plus> and <Minus> keys to change the value of the selected option. The settings are described on the following pages. The screen is shown below.

Remote Access

You can disable or enable the BIOS remote access feature here.

Serial Port Number

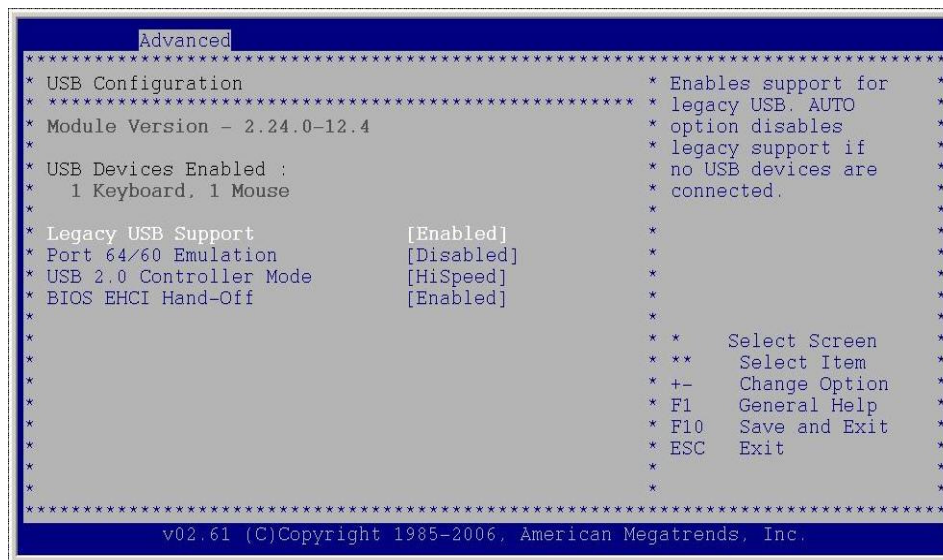

Select the serial port you want to use for console redirection. You can set the value for this option to either *COM1* or *COM2*.

Serial Port Mode

Select the baud rate you want the serial port to use for console redirection.

➤ USB Configuration

You can use this screen to select options for the USB Configuration. Use the up and down <Arrow> keys to select an item. Use the <Plus> and <Minus> keys to change the value of the selected option. The settings are described on the following pages. The screen is shown below.

Legacy USB Support

Legacy USB Support refers to the USB mouse and USB keyboard support. Normally if this option is not enabled, any attached USB mouse or USB keyboard will not become available until a USB compatible operating system is fully booted with all USB drivers loaded. When this option is enabled, any attached USB mouse or USB keyboard can control the system even when there is no USB drivers loaded on the system. Set this

value to enable or disable the Legacy USB Support. The Optimal and Fail-Safe default setting is *Disabled*.

➤ **CPU Configuration**

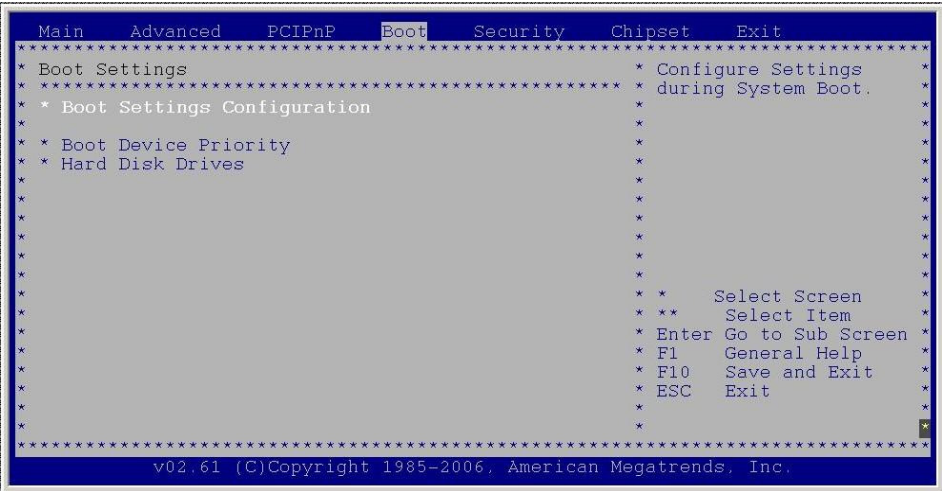

You can use this screen to select options for the CPU Configuration. Use the up and down <Arrow> keys to select an item. Use the <Plus> and <Minus> keys to change the value of the selected option.

Note: The CPU Configuration setup screen varies depending on the installed processor.

➤ **Boot Settings**

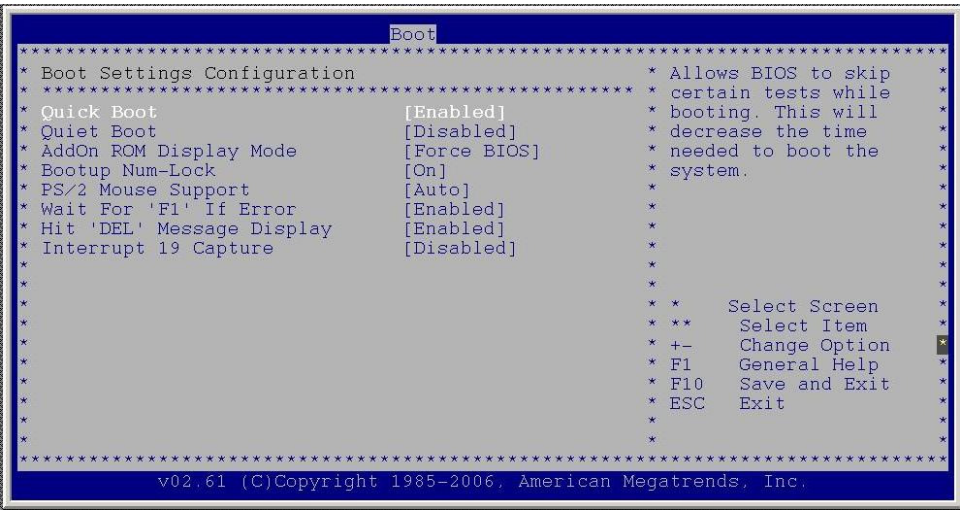

Select the *Boot* tab from the setup screen to enter the Boot BIOS Setup screen.

➤ **BOOT SETTINGS CONFIGURATION SCREEN**

Boot Settings Configuration

Use this screen to select options for the Boot Settings Configuration. Use the up and down <Arrow> keys to select an item. Use the <Plus> and <Minus> keys to change the value of the selected option. The settings are described on the following pages. The screen is shown below.

Quick Boot

The Optimal and Fail-Safe default setting is *Disabled*.

Quiet Boot

Set this value to allow the boot up screen options to be modified between POST messages or OEM logo. The Optimal and Fail-Safe default setting is *Enabled*.

Add-On ROM Display Mode

Set this option to display add-on ROM (read-only memory) messages. The Optimal and Fail-Safe default setting is *Force BIOS*. An example of this is a SCSI BIOS or VGA BIOS.

Boot up Num-Lock

Set this value to allow the Number Lock setting to be modified during boot up. The Optimal and Fail-Safe default setting is *On*.

PS/2 Mouse Support

Set this value to allow the PS/2 mouse support to be adjusted. The Optimal and Fail-Safe default setting is *Enabled*

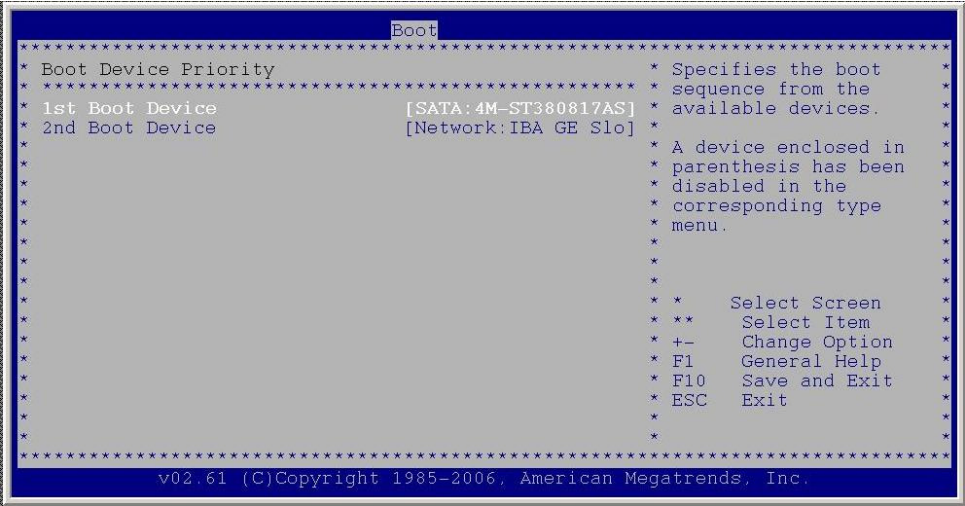

Interrupt 19 Capture

Set this value to allow option ROMs such as network controllers to trap BIOS interrupt 19.

➤ **BOOT DEVICE PRIORITY**

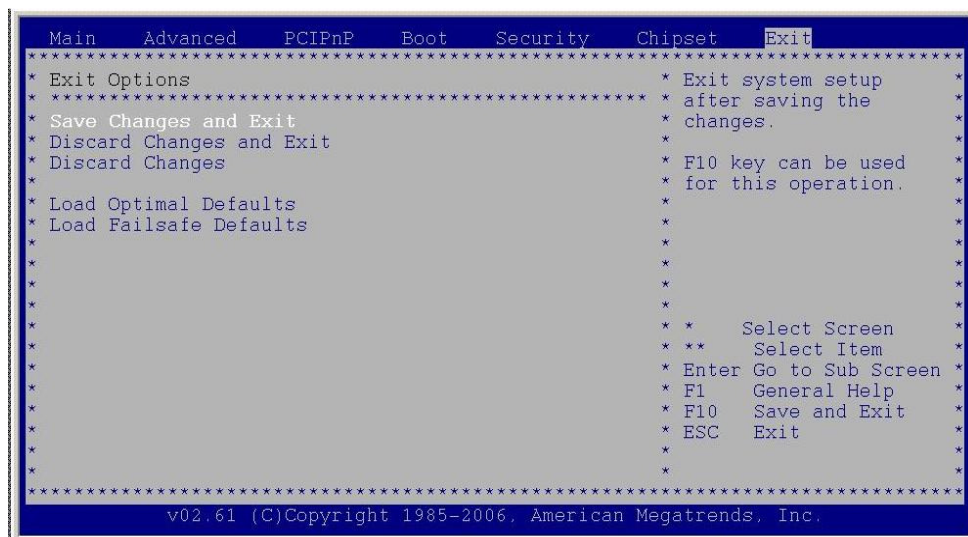

Boot Device Priority

Use this screen to specify the order in which the system checks for the device to boot from. To access this screen, select Boot Device Priority on the Boot Setup screen and press <Enter>. The following screen displays:

➤ **Exit Menu**

Select the *Exit* tab from the setup screen to enter the Exit BIOS Setup screen. You can display an Exit BIOS Setup option by highlighting it using the <Arrow> keys. All Exit BIOS Setup options are described in this section. The Exit BIOS Setup screen is shown below.

Saving Changes and Exit

When you have completed the system configuration changes, select this option to leave Setup and reboot the computer so the new system configuration parameters can take effect. Select Exit Saving Changes from the Exit menu and press <Enter>.

Discarding Changes and Exit

Select this option to quit Setup without making any permanent changes to the system configuration. Select Exit Discarding Changes from the Exit menu and press <Enter>.

Discard Changes

Select Discard Changes from the Exit menu and press <Enter>.

Load Optimal Defaults

Automatically sets all Setup options to a complete set of default settings when you select this option. Select Load Optimal Defaults from the Exit menu and press <Enter>.

Load Fail-Safe Defaults

Automatically sets all Setup options to a complete set of default settings when you select this option. The Fail-Safe settings are designed for maximum system stability, but not maximum performance. Select the Fail-Safe Setup options if your computer is experiencing system configuration problems.

Select Load Fail-Safe Defaults from the Exit menu and press <Enter>.
